SmartFilter Products

Secure Computing's Web Filtering Solution

Protect your organization from risks associated with employee Internet use with SmartFilter® Web filtering. SmartFilter products help limit exposure to security risks such as viruses and malware and reduce legal liability while increasing productivity and preserving your bandwidth for business related activities.

The Web You Want. The Control You Need.

Today's dynamic Web 2.0 environment creates significant security challenges for organizations. In addition to malicious code and Web-borne viruses entering networks by users simply going to an infected Web site—often unintentionally, collaborative sites such as blogs and wikis and other dynamic sites can now pose a security threat as well.

SmartFilter products enable organizations to understand and monitor their Internet use, while taking effective steps to provide appropriate control over outbound Web access and protection against all forms of today's Web-based threats. The SmartFilter filtering line includes SmartFilter for corporations and *SmartFilter, Bess® edition* for education.

Powered by TrustedSource

SmartFilter now incorporates global intelligence from the company's industry-leading reputation system, TrustedSource. Like a credit agency provides credit scores to enable reliable commerce, TrustedSource provides reputation scores for URLs, domains and IPs that are based on security risk. Using this real-time scoring, SmartFilter allows organizations to detect and prevent web security threats such as spyware, phishing or other malware.

Reputation-Based Filtering + Category-Based Filtering = Best Protection Available

SmartFilter delivers the best protection available with the powerful combination of reputation-based filtering powered by TrustedSource and the award-winning SmartFilter Internet Database.

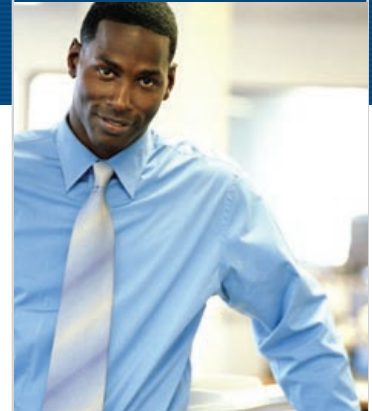

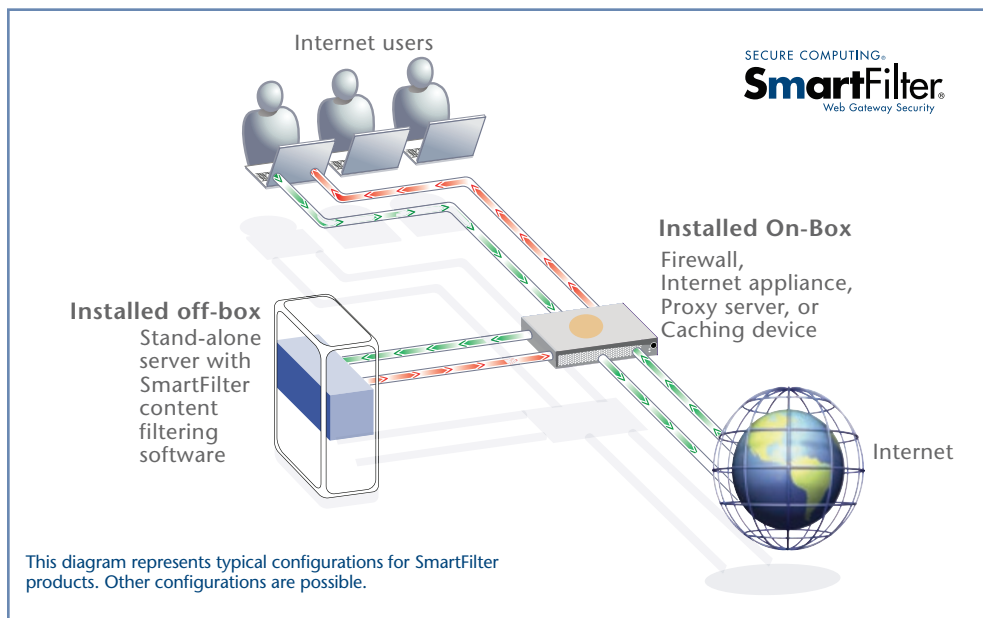

- TrustedSource reputation network proactively finds, reports, and enables SmartFilter to block traffic to and from questionable sources. Relying on its global reputation network and knowledge of Internet entities, the TrustedSource network identifies potentially malicious behavior or intentions to distribute malicious code.
- SmartFilter Internet Database provides a proven database of over 20 million blockable Web sites in 91 categories. Built by our team of multi-lingual Web Analysts using state-of-art technology, the coverage, quality, and accuracy of SmartFilter is unmatched. Your purchase of SmartFilter includes comprehensive coverage of all our categories, with no premium charges or additional costs.

Understand Your Organization's Web Usage with Our Powerful Reporting Solution

Reporting is a key element of any Web filtering solution, and SmartFilter products include powerful reporting capabilities. With SmartReporter™, you can quickly understand how your organization is using the Web, isolate problems, document inappropriate Web activity, and tailor your filtering settings to effectively enforce your Web usage policies.

Additionally, SmartFilter is available as an On-Box component of Secure Computing's Webwasher Web Gateway Security Appliance and Sidewinder Network Gateway Security Appliance. With Webwasher, you'll find a complete portfolio of Web Gateway Security appliances which protect enterprises from malware, data leakage, and Internet misuse, and ensure policy enforcement, regulatory compliance, and a productive application environment. And with Sidewinder, you'll find Unified Threat Management (UTM) firewalls that defend networks and Internet-facing applications from all types of malicious threats.

SmartFilter products also run off-box, providing additional flexibility and deployment options with a minimum impact on your network.

SmartFilter is one of the most widely deployed filtering solutions in corporate environments. Thousands of companies use SmartFilter products every day to safeguard their work environments from offensive content, limit legal liability, and protect against malicious code that can enter networks when employees use the Internet.

SmartFilter, Bess edition is the #1 choice for K-12 schools to cost-effectively protect students from inappropriate Web content and comply with regulations such as the Children's Internet Protection Act (CIPA).

CIPA requires public schools and libraries to certify that they have Internet safety policies and technology protection measures in place (such as software filtering technology) in order to qualify for applicable discounts. SmartFilter, Bess edition helps these organizations comply with these requirements.

Supported Operating Systems

SmartFilter/SmartFilter, Bess edition

- Windows 2000/2003/XP Professional/Vista
- Solaris 8/9/10
- Linux

Supported platforms

SmartFilter and SmartFilter, Bess edition
